A Library Information System (LIS)

The system may have a few dozen requirements. For illustration, three of them, are

Req1. The patron can check out documents
Req 2. The patron can return documents
Req 3. The patron can search documents

A partial use case is developed to illustrate these three requirements.

```
Actor: Patron
1. The Patron choose “Checkout”
3. The call number is scanned or entered
5. The patron confirms checkout

System: LIS
0. System displays the main screen
2. The system displays “Checkout” screen
4. The system displays the document details for confirmation
6. The system updates the database and displays a checkout complete message
```

Note: database is the passive actor
